COURSE FEE:
₹18000 incl. of taxes

BATCH STARTS:
11TH JUNE
6 DAYS/WEEK
(4:30 PM-8:30 PM)

YOUNIFIED FOUNDATION

OVERVIEW

The course is designed to sharpen the problem-solving skills of students using both JAVA and C++. We follow step-by-step approach to make students fall in love with programming and ignite their passion of coding with the help of problems ranging from easy to intermediate to expert level.

It is ideal for beginners who want to learn new skills, make informed choices about career goals, and set themselves up for success.

MODULES

Core Java and C++

(Lecture 1-8)

- Getting Started
- Conditionals and Loops
- Operators and Patterns
- Pointers
- Data Types & Number System
- Bit Manipulation
- Functions, Variables and their Scope
- Arrays, 2-D arrays
- Strings and StringBuilder
- Searching and sorting

Outcome : This part lays a strong foundation for rigorous practice in rest of the course.

Recursion & Backtracking

(Lecture 9-16)

- Basics and Control Flow in recursion
- Recursion with arrays
- Recursion with ArrayLists
- Recursion on the way up
- Recursion and combinatorics
- Recursion with queens and knights
- Recursion and memory maps
- Advanced recursion – sudoku, crossword, bit masking

Outcome: This part lays a strong foundation for trees and graphs. “Peppers” invariably perform better than peers at recursive codes.

Complexity Analysis

(Lecture 17-18)

- Time Complexity analysis
- Space Complexity
- Optimised Searching, Sorting and Hashing

Outcome: This part enables the student in analysing complexity of their codes and optimising them.

DP & Greedy

(Lecture 19-24)

- Recursion to DP
- Memoization and Tabulation
- 1d DP
- 2d DP
- Classical DP Problems
- DP with Bit Masking
- Greedy vs DP

Outcome: This part prepares the student for competitive programming contests by laying a fairly strong foundation in dynamic programming.

Data Structures

(Lecture 25-36)

Lesson Titles	Topics
Stack and Queues	<ul style="list-style-type: none">➤ Introduction and Implementation of Stack and Queue➤ Adapter Design Pattern➤ Application of Stack and Queue➤ Interview Questions
Linked Lists	<ul style="list-style-type: none">➤ Implementation of Linked List Data Structure➤ Application of Linked List➤ Iterator Design Pattern➤ Interview Questions
Generic Tree	<ul style="list-style-type: none">➤ Introduction of hierarchical data structure➤ Implementation of Generic Tree➤ Application of Generic Tree➤ Interview Questions
Binary Tree	<ul style="list-style-type: none">➤ Implementation of Binary Tree➤ Application of Binary Tree➤ Interview Questions

Outcome: This part emphasises on subtleties of linear and hierarchical data structures. Linked Lists and Trees feature very prominently in interviews.

Advanced Data Structure

(Lecture 37-44)

Lesson Title	Topics
BST & AVL	<ul style="list-style-type: none">➤ Balancing Property➤ Implementation of BST & AVL➤ Application of BST & AVL➤ Interview Questions
HashMap	<ul style="list-style-type: none">➤ Applications of HashMap➤ Iterable vs Iterator➤ Interview Questions
Priority Queue	<ul style="list-style-type: none">➤ Applications of Priority Queue➤ Adapter Design Pattern➤ Array.sort & Collection.sort➤ Comparable vs Comparator➤ Interview Questions
Generics	<ul style="list-style-type: none">➤ OOPs – generics, exceptions, interfaces➤ Generic Priority Queue creation➤ Generics Linked List creation➤ Generics HashMap creation
Range Queries	<ul style="list-style-type: none">➤ Segment Tree➤ Modular Segment Tree➤ Lazy Segment Tree➤ Square Root Decomposition➤ Sparse Table

Outcome: Besides preparing the student via a lot of interview questions, this part makes the student industry ready by retouching on key OOPs concepts.

Graphs & Text Processing

(Lecture 45-52)

- Adj. matrix implementation
- DFS and it's Applications
- BFS and its Applications
- Dijkstra, Prims, Kruskals, Bipartite
- DAG implementation, Topological sort
- Bellman ford & Floyd Warshall
- Trie and Huffman Encoder
- Rabin Karp, KMP, Z, Manachers

Outcome: This part adds the "x-factor" in student by doing a lot of practice on graphs and key text processing algorithms.

“PEP” EFFECT

1. **Videos:** Online videos for important topics to help revise and cover missed classes.
2. **Assignment:** Practice hundreds of high-quality questions given as Hacker rank Assignment.
3. **Doubt Support:** Online TA help in prompt doubt support. **1-12TA to student ratio in classes.**
4. **Revision Option:** We provide our students with unlimited revision option so they can revise as many times they want that to free of cost.
5. **Back-up Class:** We provide catch up classes via doubts teacher in case you miss one.

PATH AHEAD

This course covers a lot of ground for a starter. Now you are ready to explore more.

- ✓ You may like to compete online for bagging placements and internships. We have a “Interview Prep” course for that purpose.
- ✓ You might like to make real world websites, Web Apps, Mobile Apps, deploying them on cloud or automating your boring task. “DEV-101” will be the perfect pick for your choices.

LET'S TALK

1. Call us on **011-4019-4461**, or
2. Walk in our centre at **PepCoding, 3rd Floor, 15 Vaishali, Pitampura, Opposite Metro Pillar 347, Above Karur Vysya Bank, New Delhi-110034, Nearest Metro Station - Kohat Enclave**, or
